REVIEW
OF
BUSINESS CONDITIONS

ALBERTA

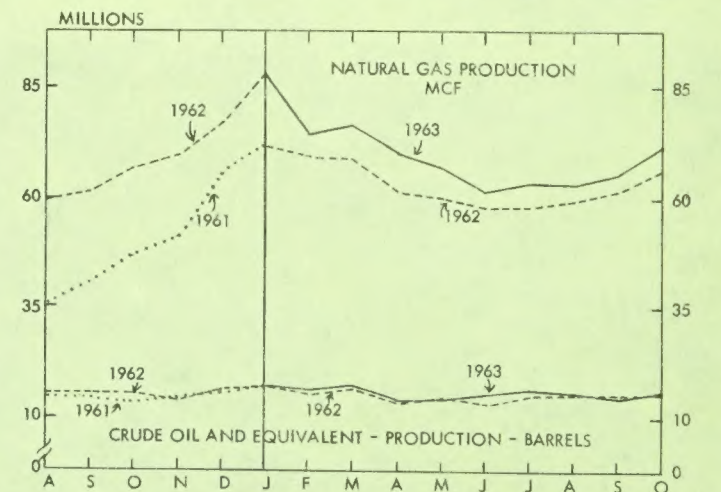

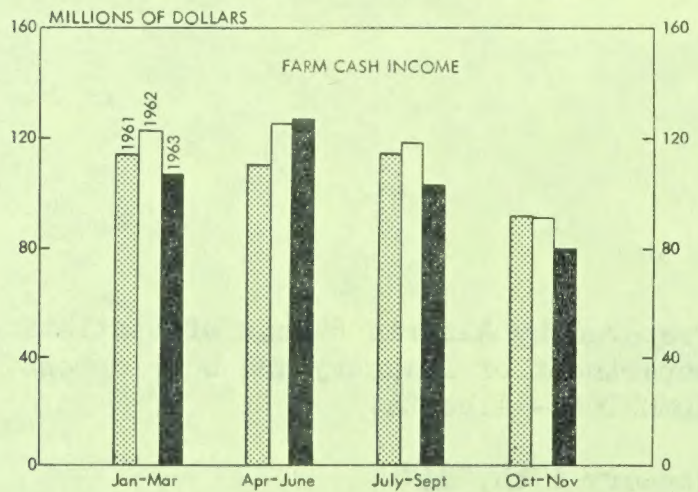

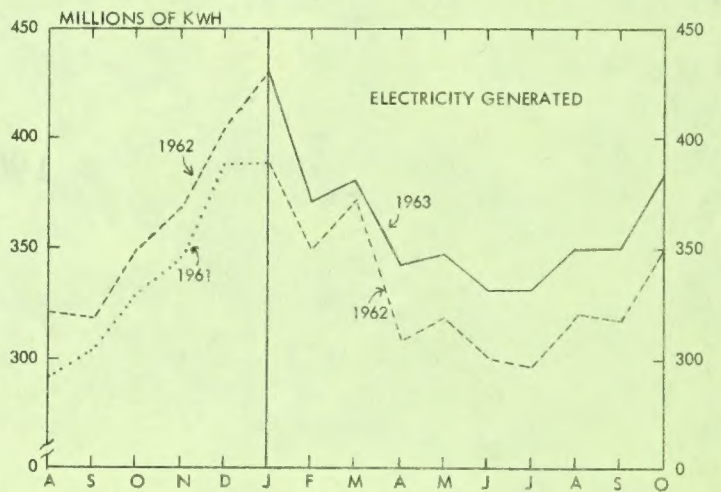

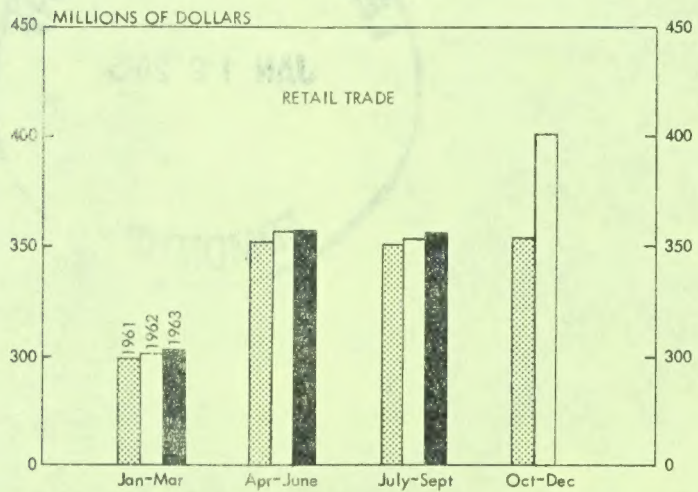

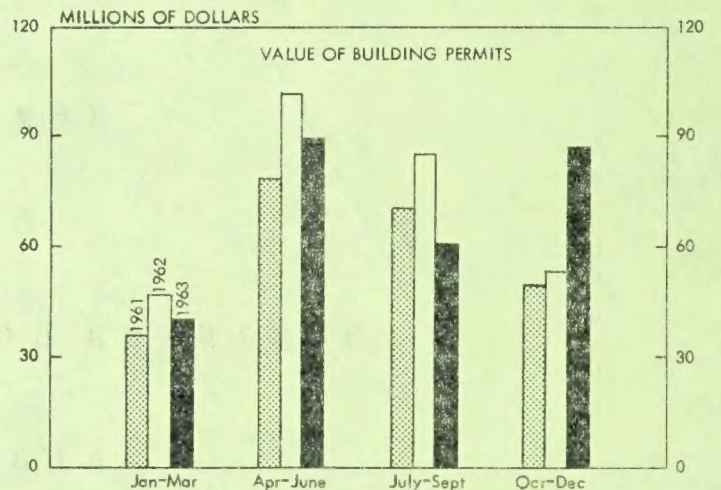

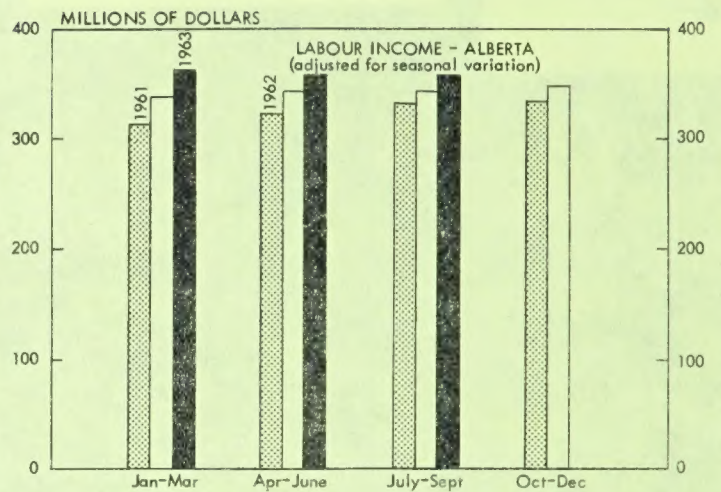

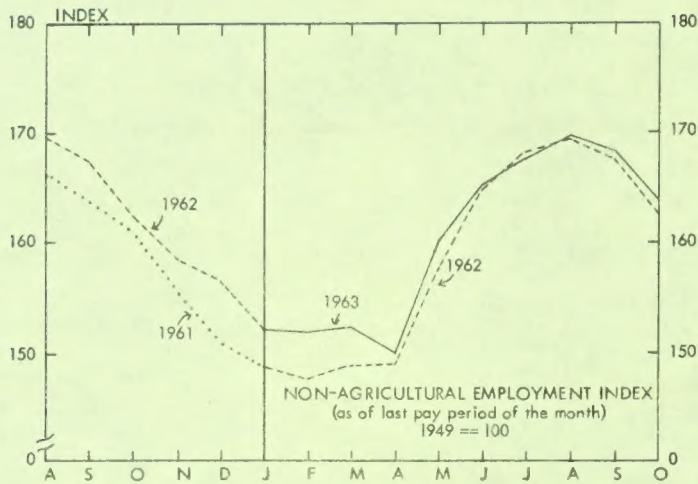

4/ 1963

Preliminary

Prepared by Alberta Bureau of Statistics,
Department of Industry and Development,
EDMONTON - Alberta.

January 17th, 1964.

REVIEW OF BUSINESS CONDITIONS - ALBERTA - 1963

The Alberta economy maintained during 1963 the momentum attained during the past two years. A note of optimism is apparent in most of the year-end appraisals of the current situation and outlook for 1964 as made by Alberta businessmen. There is little in the international outlook to generate pessimism; and for the domestic Canadian economy the measures taken during the past few years appear to be bearing fruit in the increased rate of economic growth. Particularly beneficial appears to have been the currency revaluation of 1962 in increasing exports of all Canadian products. No less important has been the fillip given to the Canadian manufacturing industry by making local firms more competitive over a wider range of products. The general tone of the economy seems to be healthy and optimistic.

Alberta farmers' cash income was lower than in 1962. Offsetting this fact is the assured prospect of a high level of grain sales during the current crop year. Sales of minerals rose by 12%. The value of manufacturers' shipments rose by nearly 6%. Construction industry activity, as measured by building permits issued, did not quite measure up to 1962, but nevertheless was the second highest on record. Electricity generated, a significant measure of industrial growth, rose by 9% to maintain its post-war pace. Forestry output was also well above that attained in the 1962 advance.

Indications of consumer optimism were apparent in higher retail sales generally, and of automobiles in particular. It is worthy of comment that per capita retail sales are the highest in Canada. Bank debits rose by 13%; labour income by over 5%.

Employment, throughout most of the year, in the non-agricultural industries was higher than in 1962 -- as should be expected of a larger labour force. "Full employment" is assumed when 97% or more of the labour force are gainfully employed. (It is debateable whether, under the climatic conditions of western Canada where massive shifts from industry to industry must take place on a seasonal basis, such a high percentage is realistic.) In any case, full employment was again achieved during the late summer as has frequently been the case in recent years.

AGRICULTURE --

Farmers' cash income to the end of November was nearly 9% lower than at the same date in 1962. Both major sources of income, grains and livestock, registered substantial declines. Wheat sales were lower by nearly 7 million bushels and \$10 million; prices for the 1963 crop are higher. Flax seed sales were lower by nearly one million bushels and over \$3million. Higher returns from sales of oats, barley and rye were not enough to offset the lower returns from sales of wheat and flaxseed. P.F.A.A. and acreage payments to the end of September were lower by nearly \$13.5 million.

FARMERS' CASH INCOME FROM MAJOR SOURCES - ALBERTA
January - November, 1962 and 1963

	<u>1962</u> \$	<u>1963</u> \$
Grains (Including Supplementary Payments)	188,800,000	168,641,000
Livestock	221,616,000	199,811,000
Dairy Products	38,380,000	38,846,000
Poultry Products	<u>8,846,000</u>	<u>10,408,000</u>
TOTAL	<u><u>457,642,000</u></u>	<u><u>417,706,000</u></u>

Livestock prices have been slipping lower as the year progressed. As predicted some years ago, American herds have been built up again and the export market has not been exerting a firming effect. Fewer livestock have been coming to the market. As compared with the eleven month period of 1962 net cattle sales were off by 26,000 head; calf sales by 58,000; sheep and lamb sales by 30,000; and hog sales by over 300,000. Total income from sale of livestock dropped from \$222 million to \$200 million.

Income from both dairy and poultry products was higher however.

MINERALS --

The value of minerals sold rose from \$567 million in 1962 to \$636 million. The major increases were in sales of crude oil and condensates, natural gas, and sulphur. Coal production increased by a substantial 8% in volume, but the value was down by 3%. Cement production and sales dipped along with the decrease in construction activity.

Of particular note was the substantial rise in sales of sulphur-- over 80% higher than in 1962, although the sales were achieved through a sharp reduction in unit prices.

(The above comments are based on knowledge of provincial records. The estimates on the following page were prepared by the Dominion Bureau of Statistics.)

MANUFACTURING --

Over one hundred major Alberta manufacturing firms were asked to compare their 1963 and 1962 sales figures. Seventy eight per cent reported increases ranging from a few thousand dollars to several million. Twenty-two per cent reported a lower sales volume. The decreases were heavily concentrated among the cement products firms; and there was an additional scattering of decreases among the iron products firms. Overall, the manufacturers reported substantially higher shipments, at a rate of around 6% above 1962 volume. The 1963 value is therefore estimated at \$1,035.0 million.

CONSTRUCTION --

The construction industry did not attain quite the level of activity achieved in 1962, but was very little below. The value of building permits issued totalled \$278 million as compared with \$288 million. Among the cities -- Calgary, Red Deer, Wetaskiwin and Lloydminster exceeded 1962 building volume by a comfortable margin. Building volume in the rural centres rose by 10% to \$77 million.

The federal government winter housebuilding incentive programme has had some effect. Permits for construction of 3,300 dwelling units were issued in the three month period - October to December as compared with 2,325 in the last quarter of 1962. At a cost to the federal treasury of \$1,650,000, an additional 1,000 units are under construction, and giving winter employment. A specified purpose of the legislation was to level the construction employment throughout the year.

REGIONAL OUTLOOK

- Resumes of Reports by Area Correspondents -
December - 1963

CALGARY:

Retail and wholesale sales were higher than in 1962. Construction activity was also greater, Calgary being one of the few major cities to record an increase. The volume of manufacturing increased substantially, and there was a most encouraging list of new industries beginning operations. Grain crops in southern Alberta were generally good, but the full impact of increased grain sales is expected to be felt in 1964. There is an optimistic tone evident in the business community.

CAMROSE:

Crops in the area were the best on record due to ideal weather conditions. Retailers and wholesalers report a very good year. Although construction activity was somewhat less than in 1962, there was little surplus labour. Construction activity is expected to remain brisk throughout 1964. The Camrose pipe mill is in operation where there is a substantial volume of pipeline building in western Canada. The tube mill has been working close to capacity throughout the year.

EDMONTON:

Edmonton commercial and industrial firms had a prosperous year. Farm income in the area has been well maintained, and is likely to continue so. Oil and gas field development and exploration out of Edmonton was active during 1963 and is expected to remain high in 1964. With the

railway construction in the north, and the consequent opening up of new market areas, further growth of Edmonton as a supply centre is assured. The manufacturing and construction industries enjoyed a brisk year. General retail and wholesale trade was bouyant, particularly by year end when the optimism engendered by wheat sales became more universally infective.

GRANDE PRAIRIE:

As 1963 progressed, it became more and more apparent that there would be a serious crop failure in the district. This led to a general feeling of pessimism as agriculture is the mainstay of the area. However, no slump had developed by year end, though there is a feeling that one may be apparent in the early part of 1964. On the other hand, the very healthy condition of the construction, forestry and oil industries will undoubtedly prove enough to pull 1964 into new records.

LETHBRIDGE:

Heavy rains at a propitious time resulted in average to above average crops on dry land. Prices for sugar were highest ever and this resulted in excellent returns for the beet farmers. Weaknesses in livestock prices have naturally been felt by those in the livestock industry. Retail trade was less bouyant, but is expected to pick up in 1964 as grain movements accelerate. Construction activity is expected to be at a higher pace in 1964. Generally it is expected that both industrial and commercial development will show good advances in 1964.

RED DEER:

In this mixed farming area seed growers, hog raisers, dairy

farmers and feed lot operators have all experienced exceptional prosperity. Retail and wholesale trade have also increased substantially. A great deal of additional retail floor space was constructed during 1963, increasing competitiveness, but it is also clear that the total market is growing at a rate to justify the expansions. The construction industry had a record year, and the outlook is very promising. Generally there is every indication that the prospects for 1964 are excellent, that retail and wholesale trade will continue to expand and that population will again increase substantially.

NEW MANUFACTURING PLANTS, ALBERTA - 1963

(The following list has been compiled from newspaper clippings and Industrial Commissioners reports.)

<u>COMPANY</u>	<u>EXPENDITURE INVOLVED</u> \$	<u>PRODUCTS OR TYPE OF OPERATION</u>	<u>STAGE OF DEVELOPMENT AS OF 31 DEC. 1963</u>
Adanac Door Manufacturing Co. Ltd., CALGARY	45,000Est.	Door Manufacturing	Renting
